Final-year B.E. student in Artificial Intelligence & Data Science with a published banking churn study and remote Data Analyst internship experience. Proficient in Python, SQL, and applied machine learning for business-driven analytics.

TECHNICAL SKILLS

- **Programming & Analysis:** Python (Pandas, NumPy), SQL, Git, Jupyter
- **Visualization:** Power BI, Tableau
- **Databases:** MySQL (Joins, Aggregations, Query Optimization)
- **Machine Learning & Analytics:** Scikit-learn, XGBoost, Feature Engineering, Classification, Regression, Time Series

EXPERIENCE

Cognifyz Technologies

Apr 2025 – May 2025

Data Analyst

Remote

- Executed end-to-end data cleaning, preprocessing, and exploratory analysis on real-world datasets to identify anomalies, trends, and data quality gaps.
- Performed SQL- and Python-driven business analysis across sales and customer datasets to derive actionable performance insights.
- Developed interactive Power BI dashboards tracking KPIs and revenue metrics to support data-driven decision-making.
- Delivered structured analytical reports and stakeholder presentations translating technical findings into business recommendations.

PROJECTS

Data Reliability Audit Engine | FastAPI, React, Python [LINK](#)

- Built a deterministic dataset auditing framework to detect structural and statistical risks (data leakage, duplicates, constant/near-constant features) before ML modeling.
- Designed traceable Pass/Fix/Block decision outputs with scalable processing (100k+ rows) and optional local LLM explanation layer while preserving a deterministic core.

Banking Customer Churn Prediction (Research Publication) | ML Project [LINK](#)

- Engineered transactional and behavioral features to build churn classification models, addressing class imbalance using SMOTE and threshold calibration.
- Achieved AUC 0.87 and F1-score 0.63, outperforming baseline models; deployed via interactive Streamlit dashboard for business interpretability.

SQL Business Intelligence Case Study | SQL [LINK](#)

- Developed 25+ optimized SQL queries (joins, subqueries, aggregations, rollups) to analyze retail sales, profitability, and regional performance trends.
- Automated KPI reporting workflows using stored procedures and UDFs to support data-driven business decisions.

Global Commodity Price Analysis (1960–2022) | Data analysis [LINK](#)

- Analyzed 62 years of monthly commodity price data (Oil, Coffee, Tea, Sugar) to evaluate long-term trends, correlations, and structural market shifts.
- Identified seasonality patterns, anomalies, and macroeconomic event impacts (2008 crisis, COVID-19) using time-series analysis and visualization techniques.

EDUCATION

Sambhram Institute of Technology

Aug 2022 – 2026

Bachelor of Artificial Intelligence & Data Science

CGPA - 7.7

Bengaluru, Karnataka

CERTIFICATION

Python & SQL Programming — Intellipaat

Data Analysis Internship Certification — Cognifyz Technologies (2025)
